Instructions to candidates

1. The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in this Question/Answer booklet preferably using a blue/black pen. Do not use erasable or gel pens.
3. You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.
4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
5. It is recommended that you do not use pencil, except in diagrams.
6. Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Question 8

(6 marks)

Use mathematical induction to prove the following proposition $P(n)$ for every integer $n \geq 0$.

$$P(n): 1 + 7 + 13 + 19 + \dots + (6n + 1) = (n + 1)(3n + 1)$$

| Solution |
|---|
| <p>1. When $n = 0$:</p> $P(0): LHS = 6(0) + 1 = 1$ $RHS = (0 + 1)(3(0) + 1) = 1 = LHS$ $\therefore \text{true for } n=0$ <p>2. Assume $P(k)$ is true:</p> $\Rightarrow 1 + 7 + \dots + (6k + 1) = (k + 1)(3k + 1)$ <p>3. Now required to prove $P(k + 1)$:</p> $RTP: 1 + 7 + \dots + (6k + 1) + (6(k + 1) + 1) = ((k + 1) + 1)(3(k + 1) + 1)$ $= (k + 2)(3k + 4)$ $LHS = 1 + 7 + \dots + (6k + 1) + (6(k + 1) + 1)$ $= (k + 1)(3k + 1) + (6k + 7)$ $= 3k^2 + 4k + 1 + 6k + 7$ $= 3k^2 + 10k + 8$ $= (k + 2)(3k + 4)$ $= RHS$ $\therefore \text{true for } n=k+1$ <p>Since $P(0)$ is true, and we have shown that $P(k + 1)$ is true if $P(k)$ is true, then $P(n)$ is true for all integers $n \geq 0$.</p> |
| Specific behaviours |
| <ul style="list-style-type: none"> ✓ shows true for $n = 0$ ✓ states assumption that $P(k)$ is true ✓ substitutes the assumption into the $n = k + 1$ case/expression ✓ expands LHS ✓ factors LHS to required form ✓ uses principle of mathematical induction, i.e. concluding statement |
